

June 13th Free Public Outreach Workshop & STEM Training :

Sound Choices: Empowering People & Protecting Nature

Nature's voice is becoming lost to the noise of technology. The nonprofit organization, A Quieter Future (AQF), seeks to protect nature's voice by empowering you and the next generation.

AQF & the Institute for Noise Control Engineers are offering a **free workshop on June 13th, in Providence, RI**. Hear how noise affects marine life, terrestrial wildlife and plants.

Morning Session: Invited Speakers include:

- **Dr. Jesse Barber, Boise State University:** researching the effect of noise on birds
- **Lang Elliot, The Music of Nature:** the beauty of sound in nature,
- **National Oceanic and Atmospheric Administration (NOAA):** how noise affects marine life.

Afternoon Session: Educators will be trained to use **hands-on inquiry based STEM kits** on noise issues. **Stellwagen Bank National Marine Sanctuary** and **The National Park Service** are presenting and/or collaborating with the STEM kits. The kits **empower youth** to be a part of the solution. The packets meet Next Generation Science Standards and National Science Standards. Kits are free.
